FIFTY-SECOND ANNUAL REPORT

OF THE

REGISTRAR-GENERAL

OF

BIRTHS, DEATHS, AND MARRIAGES
IN ENGLAND.

(1889.)

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, EAST HARDING STREET, FLEET STREET, E.C., and
32, ABINGDON STREET, WESTMINSTER, S.W.; or

REPORT

TO

The Right Honourable CHARLES T. RITCHIE, M.P.,
President of the Local Government Board, &c. &c.

(1889.)

SIR,

I HAVE the honour to submit to you the following report on the births, marriages, and deaths registered in England and Wales in the year 1889.

POPULATION.

The population of England and Wales, as enumerated in April 1881, consisted of 25,974,439 persons. The natural increase, or the excess of births over deaths from that date to the middle of 1889 amounted to 3,067,314; so that the population at the later date, could its growth be determined simply by the balance between births and deaths, would have been 29,041,753. Emigration and immigration cannot, however, be disregarded in an estimate of the population; and, in the absence of sufficiently full information on these points, the estimated populations published in the Annual Reports are based on the assumption that the rate of increase which prevailed in the last intercensal period has since been maintained, a method which, it has been shown (see pp. v-vi of 50th Annual Report), is not likely to lead to serious error when so large an area as the entire country is dealt with.

The population, thus estimated, in the middle of the year 1889 was 29,015,613, consisting of 14,119,824 males and 14,895,789 females (Table 1). It is on this estimated population that the rates in this report have been calculated.

MARRIAGES.

The number of marriages registered in the year 1889 was 213,865, corresponding to a rate of 14·7 persons married per 1000 living. This is a higher rate than that in any year since 1884, when it was 15·0, declining to 14·4 in the following year, and to 14·1, the lowest on record, in 1886; while both in 1887 and 1888 the rate was 14·2. An examination of the rates in counties shows that the rise was general, excepting that in Berkshire, Dorsetshire, and Leicestershire the rate in 1889, as compared with that in the preceding year, was stationary, and that in Hertfordshire, Huntingdonshire, Norfolk, and Rutlandshire there was a slight decline. The rise was equal to 9·7 per cent. in Buckinghamshire, 11·2 in Derby, 13·0 in Herefordshire, 13·8 in Northumberland, 14·7 in Westmorland, 16·7 in Bedfordshire, and 17·7 in Monmouthshire. In London the improvement was very slight.

Continuing the comparison, which has been drawn in former reports, of the marriage-rate with the value of British exports and with the price of wheat, it is noteworthy that, though the marriage-rate and the mean

value of exports per head of population rose together, as is the general rule, the average price of wheat fell and was 6·5 per cent. under the low average price of the preceding year.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS and IMPORTS, PRICE of WHEAT, and amount cleared at the London Bankers' Clearing House, 1860-89.*

YEARS.	Marriage-rate.	Value per Head of Population of United Kingdom.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures relating to exports and imports and to the price of wheat are derived from the Board of Trade Statistical Abstracts; and those showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are derived from the same source.

Forms of Marriage.—Of the 213,865 marriages contracted in the year, 149,356, or 698 per 1000, were celebrated according to the rites of the Established Church, and 64,509, or 302 per 1000, otherwise. These proportions show a further development of the tendency, alluded to in former reports, for church marriages to decline, the proportion of such marriages in 1889 being the lowest yet recorded. The increase in the proportion of other marriages was principally, as usual, under the head of civil marriages in Superintendent Registrars' offices. The proportions of Roman Catholic marriages and those of other Christian denominations were the same in 1889 as in the preceding year, while there was again an increase in the proportion of marriages by Jewish rites (Table 5).

The proportion of marriages that are celebrated after publication of banns has remained very constant for some years, having fluctuated only between 628 and 632 per 1000 marriages of all kinds in the course of eight years. But when these marriages after banns are compared merely with the total of Church marriages, there is a manifest tendency to increase, this increase taking place at the expense of marriages by licence and marriages by Superintendent Registrar's certificate. The proportion rose steadily year by year from 870 per 1000 in 1880 to 906 per 1000 in 1889.

First marriages ; Re-marriages.—The marriages of bachelors, spinsters, widowers, and widows in 1889 all show an increase as compared with the marriages of persons of these several conditions in the previous year; but while the proportionate numerical increase of bachelors who married was 5·4 per cent., and that of spinsters 5·2 per cent., the proportionate numerical increase of widowers who married was but 1·4 per cent., and that of widows 2·4 per cent. It will be seen in Table 7 that, of 1000 men who married in 1889, 885 were bachelors, and 115 were widowers; and, of 1000 women who married, 919 were spinsters and 81 widows. The proportions of widowers and widows show a still further decline.

Re-marriages of Divorced Persons.—The number of persons married in 1889 who were described in the register as having been previously divorced was 150, including 75 men and 75 women; the number of such persons married was smaller than in recent years, for in the preceding four years the numbers were 170, 163, 173, and 178 respectively. Of the 75 divorced men, 59 married spinsters, 14 married widows, and 2 married divorced women. Of the 75 divorced women, 62 married bachelors, 11 married widowers, and 2 married divorced men.

Ages at Marriage.—In 8,062, or 3·8 per cent., of the marriages, the ages of both contracting parties were not inserted in the register. In 1888 the proportion was 5·0 per cent., to which it had gradually fallen, as was stated in the last Report, from such high proportions as 40·6 in 1858 and 21·1 in 1878. The mean age of the 205,803 couples, whose ages were stated, was 28·23 years for men, and 25·95 years for women. As was pointed out in the Forty-eighth Report (pp. viii, ix) there has been since 1873, concurrently with a falling marriage-rate, a steady rise in the mean ages at marriage. In 1889, however, though there was an appreciable rise in the marriage-rate, this increase in the mean ages at marriage was arrested, for in the preceding year the mean age had been 28·29 years for men, and 25·97 years for women. There was a further decline in 1889 in the marriages of males under age, the proportion in 1,000 marriages being 61, while the proportion of females under age was 199, or the same as it was in 1888.

Signature in Marriage Register.—The men who in 1889 signed the marriage register with marks instead of writing their names were in the proportion of 78 in 1000, and the women in that of 90 in 1000; while in 27 out of 1000 marriages both husband and wife used that form of signature. With the progress of elementary education there has been a constant diminution in the proportion of both men and women signing with marks; and in 1889 the proportion, as compared with that for 1888, showed a reduction of 6·0 per cent. for men and of 7·2 per cent. for women.

Buildings registered for the Solemnisation of Marriages.—At the end of 1889 there were 14,966 Churches or Chapels belonging to the Established Church in which marriages could be solemnised, showing an increase of 43 upon the number at the end of the preceding year. There were also 10,335 buildings registered for marriage by other rites than those of the Established Church (Table 9), showing an increase of 219, or 2·2 per cent. upon the number on the register at the end of 1888.

Certified Places of Worship.—During the year 1889, 633 new buildings were certified for religious worship under the provisions of the Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, while 151 buildings already certified were removed from the register by cancellation; the number of

buildings so certified on the register at the end of the year was 26,433. It is probable, however, that some of these are no longer used, though no steps have been taken to remove them from the register by cancellation.

BIRTHS.

The births registered in the year numbered 885,944, and were in the proportion of 30·5 to 1000 persons living. This is the lowest birth-rate recorded in any of the last 50 years, and a further step in the decline which has gone on continuously since 1876, when the birth-rate was 36·3, and at its maximum. (Table 2.)

The estimates of the living population in single counties, in a year so far removed from the last enumeration, are of course doubtful; but, accepting such estimates as correct, the rate varied from 24·7 in Rutlandshire, 24·8 in North Wales, 25·0 in Sussex, 26·1 in Herefordshire, and 26·9 in Surrey (extra-met.), to 33·2 in South Wales, 33·8 in Staffordshire, 33·9 in Durham, 35·0 in Essex, and 36·8 in Monmouthshire, most of the latter being mining counties, in which the birth-rate is almost invariably high. (Table 10.)

Sex.—The male births numbered 451,218, and the female births 434,726, the former being to the latter in the proportion of 1038 to 1000, which was also the proportion in the preceding decennium 1879–88.

Illegitimate Births.—The infants registered as born out of wedlock numbered 40,627, being in the proportion of 1·4 to 1000 of the population, and 46 to 1000 registered births; these proportions being the same as in the immediately preceding year, 1888, but otherwise the lowest on record. (Table 2). The registration counties in which the proportion of illegitimate to total births was highest were, as usual, Norfolk, Herefordshire, Shropshire, Cumberland, Westmorland, and North Wales. (Table 10.)

DEATHS.

The deaths registered in the year numbered 518,353, and were in the proportion of 17·9 to 1000 of the estimated population. In the next preceding year the proportion had been 17·8, and these two rates are by far the lowest as yet recorded, the next lowest having, moreover, been that of the immediately preceding year 1887, when the rate was 18·8. In each of the nine years of the current decennium the recorded rate has been under 20·0, whereas in no previous year had it ever fallen so low as that point. (Table 2.)

County death-rates.—It has been mentioned already that the estimates of the population of separate counties are not very trustworthy; accepting them, however, as accurate, the death-rate in every county in 1889 was below the previous decennial average, with the exceptions of Northumberland, and Westmorland; but varied from 13·7 in Sussex, 14·0 in Surrey (extra-met.), 14·3 in Berkshire, and 14·8 in Rutlandshire and Huntingdonshire, to 19·1 in Durham, 19·3 in South Wales, 19·4 in the West Riding, 20·3 in Monmouthshire, 20·9 in Northumberland, and 21·0 in Lancashire, the geographical distribution of low and high rates being much the same as in the previous decennium. (Table 10.)

Sex.—The 518,353 registered deaths included 266,102 of males and 252,251 of females. The death-rate of males was 18·8, and that of females 16·9 per 1000 living of the corresponding sex, showing declines respectively of 8·3 and of 7·7 per cent. from the average rates in the preceding ten years.

Out of equal numbers living there were 1113 deaths of males to 1000 deaths of females, a difference somewhat below that of the previous decennial average, which gave 1119 male to 1000 female deaths.

Ages at Death.—In Tables 11-13 are given the death-rates at different ages for each sex; and it will be there seen that at every age-period from 5 to 45 years the rate both for males and for females was the lowest on record in the past half-century, though this was not the case for the remaining age-periods, namely, among children under five and persons over 45 years of age; yet even at these ages the rates were considerably below the averages of recent years. As has been pointed out in previous reports, the diminution of mortality, attributable to sanitary measures, has been much more marked in the earlier stages of life than among older persons.

The proportion of deaths of infants in the first year of life to registered births, or the infantile mortality, was 144 to 1000, and slightly above the previous decennial average which had been 141 to 1000.

Of the total 127,198 deaths of infants, 61,202 were in the first three months, 26,024 in the second three months, and the remaining 39,972 in the last six months of the first year of life. These figures, taken in connection with the registered births, give annual death-rates of 286 per thousand living under three months of age, 128 per thousand under six but over three months, and of 103 per thousand for infants between six months and a year. These rates are slightly higher than those obtained from the births and deaths in the total nine years of the current decennium (1881-89), which show respectively 282, 123, and 101 per thousand living at each age.

The infantile mortality varies enormously in different counties; being, as might be anticipated, highest in those in which the population is in large proportion urban and industrial. Of these, Lancashire and Leicestershire may be taken as examples, these being the two counties in which the infantile death-rate was highest both in 1889 and in the decennial period 1879-88; and with these may be contrasted the mainly rural counties in the South-Eastern and the South-Western Divisions (Table 10). The annual mortality in 1889 in these several areas for infants in the several subdivisions of the first year of life was as shown in the following Table:—

TABLE B.—ANNUAL DEATHS per thousand living at each Age, 1889.

Area.	0-3 Months.	3-6 Months.	6-12 Months.
England and Wales - -	286	128	103
Leicestershire - - -	338	180	118
Lancashire - - - -	321	162	140
South-Eastern Division -	227	89	68
South-Western Division -	233	90	76

From these figures it would appear that while the conditions of life in the manufacturing counties are highly unfavourable to infants at all periods in their first year, the destructive influences are much more intensely active after the first three months are past than in that earlier period; for while the rates in the two manufacturing counties, as shown in the table, are only about 50 per cent. higher than the rates in the two rural divisions for infants under three months of age, they are from 80 to 100 per cent. higher for infants between three and six months. It may, however, not impossibly be that the smaller difference in the rates of the first three months is in part due to the practice of dealing with infants who have been born alive, but have died almost immediately after birth, as though

they had been still-born, being more common in towns than in rural districts.

Among the deaths were 76 of reputed centenarians, 21 being men and 55 being women.

Urban and Rural mortality.—It has been shown that the death-rate for England and Wales rose slightly in 1889 above the rate of the preceding year. This rise was entirely brought about by an increased mortality in the Urban Districts, in which the rate rose from 18·4 to 18·6, while in the Rural Districts there was a slight decline, the rate falling from 16·7 to 16·5 (Table 24). Out of equal numbers living there were 113 deaths in the urban population to 100 in the rural population.

REGISTERED CAUSES OF DEATH.

The assigned causes of death were distributed as follows in the several classes :—

TABLE C.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths 1889.	Rate per Million living.									
		1889.	1888.	1887.	1886.	1885.	1884.	1883.	1882.	1881.	Mean 1871-80.
Zymotic diseases - -	69,776	2,405	2,097	2,660	2,648	2,507	3,094	2,639	3,088	2,660	3,724
Parasitic diseases - -	707	25	25	29	35	30	38	39	37	39	57
Dietetic diseases - -	1,893	66	62	63	59	59	58	66	68	66	63
Constitutional diseases -	91,667	3,158	3,111	3,166	3,330	3,276	3,404	3,407	3,395	3,328	3,594
Developmental diseases -	44,009	1,520	1,543	1,555	1,618	1,598	1,574	1,632	1,558	1,582	1,674
Local diseases - -	267,243	9,212	9,479	9,720	9,915	9,908	9,543	9,890	9,591	9,348	9,920
Violence - -	17,497	603	611	642	626	625	651	675	669	697	736
Ill-defined and not specified causes - -	25,466	876	871	955	1,047	1,007	1,149	1,188	1,154	1,160	1,610
All causes - -	518,353	17,865	17,799	18,790	19,278	19,010	19,511	19,536	19,560	18,880	21,378

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of specially preventable diseases numbered 69,776, and were in the proportion of 2405 to a million persons living. This rate, though considerably above the excessively low rate of the immediately preceding year, was lower than that of any other year in the current decennium, and no less than 35 per cent. below the mean of the 10 years 1871-80. The excess in 1889, as compared with the immediately preceding year, was due to the greater mortality under two headings, namely, measles and diarrhoea, the latter of which had been in 1888 at its minimum and the former exceptionally low.

The deaths from *small-pox* amounted to the unprecedentedly low number of 23, and were less than one-tenth of the smallest number recorded in any previous year. There were, however, 83 deaths ascribed to chicken-pox, and it is very probable that most of these were in reality cases of modified small-pox, true chicken-pox being an ailment that is rarely, if ever, fatal.

The deaths from *measles* numbered 14,732, and were in the proportion of 508 to a million living. This rate, though lower than that of 1885 or 1887, was higher than that recorded in any other year since 1874. It is noteworthy that while the mortality from most diseases has in late years shown a large decrease, the mortality from measles has on the other hand in three of the past five years, viz. :—1885, 1887, 1889, been in great excess. It was in London and in the counties of the Northern, the York, and the

North-western Divisions that the mortality under this heading was highest, namely, in Cheshire, Lancashire, the West and East Ridings, Durham, and Cumberland (Table 23); but the rate was also in excess in Oxfordshire, Herefordshire, and Staffordshire.

The deaths from *scarlet-fever* numbered 6698, and were in the proportion of 231 to a million living, the remarkable falling off in recent years in the mortality from this disease having thus been fully maintained. In no one of the last five years, 1885-89, did the scarlet-fever rate reach 300 per million, the average for the quinquennium being only 235, whereas in no previous year since 1855, when the mortality from this disease was first separately calculated, had the rate ever fallen so low as 400 per million, save in 1884, when it just reached that point. (Table 18.) Speaking generally, the highest rates under this heading were, as usual, in the counties of the North Midland, North Western, York, and Northern Divisions, and in South Wales (Table 23); but the mortality was also high in some of the more southern counties, and notably in Devonshire, where it reached 633 per million, mainly owing to a serious outbreak in Plymouth, in which borough the rate was no less than 3399 per million.

The deaths ascribed to *typhus* were only 137, and absolutely, as well as relatively to the population, fewer than in any preceding year in our records. The same was true of the deaths from *simple and ill-defined forms of fever*, which numbered 413.

The deaths ascribed to *diphtheria* numbered 5368, or 185 to a million living. The rate was also 185 in 1884, but with this exception there is no year since 1865 with so high a recorded mortality from this disease. (Table 18.) It was, as usual, in the South Eastern parts of England that this disease was most fatal; for of the eight registration counties in which the rate was above the average for the whole country, no less than six were in what has been designated in previous reports as the South Eastern diphtheritic region, these six being London, Kent (extra-metropolitan), Middlesex (extra-metropolitan), Essex, Sussex, and Berkshire, while of the counties in the Western diphtheritic region the only one with excessive mortality was, as had also been the case in 1888, Monmouthshire; the remaining and eighth county with a high rate being, again as in 1888, Lancashire. In considering the increase in the registered mortality from diphtheria, the remarks made in the last Annual Report (p. xxiv.) as to the vagueness with which this term is used, and the probable interchange between the headings Diphtheria and Croup, must not be forgotten. For while the deaths ascribed to diphtheria have increased, those ascribed to croup have diminished, though not in equal degree.

To *whooping-cough* were attributed 12,225 deaths, or 421 per million living, which was considerably below the average rate in the preceding decennium, which had been 461 (Table 23). This doubtlessly stands in connection with the decline in the mortality from diseases of the respiratory system, which, as will be presently seen, was almost at the lowest point yet recorded.

On the other hand the deaths from *enteric fever*, 5011 in number, or 173 to a million living, were, relatively to the population, somewhat more numerous than they had been in 1888, and equal to what they had been in 1885. Disregarding, however, these casual fluctuations, the fact remains that the rates in the past five years, 1885-89, were the five lowest rates in our records, and that the average in that quinquennium was only 176, though the lowest rate recorded in any one previous year had been 212 per million.

Taking the three headings under which continued fevers are tabulated together, the aggregate rate was below 100 per million in Berkshire, Hertfordshire, Wiltshire, Herefordshire, Rutlandshire, and Westmorland, all of which are rural counties, while it varied from 203 up to 308 per million in

Huntingdonshire, Norfolk, Dorsetshire, Leicestershire, Nottinghamshire, Cheshire, Lancashire, West and East Ridings, Durham, Northumberland, and South Wales, most of which contain a large proportion of mining or manufacturing population.

The deaths from *diarrhœa*, including *dysentery*, numbered 18,434, and were in the proportion of 635 to a million living. This rate was very considerably above that of the immediately preceding year, which was the lowest recorded for forty years, but was below the average of the preceding decennium, which had been 694. The mortality did not exceed 282 per million in Surrey (extra-metropolitan), Huntingdonshire, Wiltshire, Dorsetshire, Herefordshire, Rutlandshire, Westmorland, and North Wales, while it varied from 909 to 1025 per million in Warwickshire, Leicestershire, Lancashire, East Riding, and Durham (Table 20).

Puerperal Fever.—The deaths attributed to this cause were 1852, and, adding to these 1733 deaths from the other accidents of childbirth, we have a total of 3585 deaths directly ascribed to parturition. This was in the proportion of 4·05 deaths to 1000 registered births, a rate considerably below the previous decennial average, which had been 4·62. (Table 23.)

The mortality from *puerperal fever* stands in close relation with the mortality from *erysipelas*, the two showing a great tendency to rise or fall together, as will be seen if the figures for a succession of years, as given in Table 15, be carefully examined. In 1889 the deaths ascribed to puerperal fever were fewer than in any earlier year of the current decennium, and the same was the case with the deaths from *erysipelas*, which only amounted to 1209, whereas the average for the preceding eight years 1881–8 had been 2008. The correspondence in rise and fall between the mortality from puerperal fever and the mortality from *erysipelas* is closer when the deaths from this latter in the first three months of life are alone taken than when the mortality at all ages is the basis of comparison, from which it may be inferred with much probability that the same poisonous agency which affects young infants and produces *erysipelas*, possibly by way of the unhealed umbilical cord, also affects the recently delivered mother and results in puerperal fever.

Hydrophobia.—The deaths from this disease numbered 30, and exceeded the registered number in any one of the five next preceding years, with the exception of 1885, when no less than 60 deaths were thus caused. (Table 15.) It was pointed out in the last Annual Report that the returns for the twenty years 1869–88 lead to the conclusion that there are in this country two centres of hydrophobia in man and of rabies in animals, one of which is Lancashire, with radiation into Cheshire and the West Riding, while the other is London, with radiation into the surrounding belt of counties (Fifty-first Annual Report, pp. xiii–xv). The distribution of the deaths in 1889 harmonises with that conclusion, for of the total 30 no less than 15 were registered in Lancashire, West Riding, and Cheshire, while 7 were registered in London itself, and 5 more in the counties into which the disease was described as radiating from the metropolis, namely, 1 in Middlesex (extra-metropolitan), and 2 each in Berkshire and Hampshire. Thus 27 out of the 30 deaths occurred in one or other of the two usual areas, leaving only 3 in the rest of England, namely 1 each in Northamptonshire, Shropshire, and Worcestershire.

Parasitic Diseases.—The great bulk of the deaths in this class are deaths of infants ascribed to “thrush.” Gradually the use of this inadequate term as a cause of death has diminished, and consequently there has been a decline in the registered mortality from these diseases. The mortality in 1889 was the same as it had been in 1888, and these two years are those in which it was at its lowest.

Diætic Diseases.—The main heading in this class is intemperance. To this cause 1566 deaths, 998 being of men and 568 of women, were attributed; a number higher both actually and relatively to the population than in any previous year in our records. (Tables 15 and 16.) Possibly this fact stands in connection with the great and unexpected increase that was shown by the Chancellor of the Exchequer to have occurred in the consumption of spirits in 1889. In addition to the deaths directly ascribed to intemperance, there were 190 others among the deaths from accident in which it was stated that the deceased was drunk when the accident occurred (pp. 196, 199).

Constitutional Diseases.—The deaths in this class numbered 91,667, being in the proportion of 3158 to a million persons living; a rate scarcely different from those of the two next preceding years, but considerably lower than the previous average.

There was a considerable falling off in the mortality from *rheumatic fever*, which was at the lowest point yet reached; and though the mortality from *phthisis* was not lower in proportion to the population than it had been in the immediately preceding year 1888, it was with this exception at its minimum. The mortality from *diabetes* has long been increasing year by year, but in 1889 there was a slight decline, the rate falling from 62 per million in the two years 1887 and 1888 to 60. It was still, however, higher than in any earlier year with these two exceptions.

The deaths ascribed to cancer, using that term as a general designation for all malignant new growths, were 18,654 and in the proportion of 643 to a million persons living; showing a further increase upon the ever growing rates previously recorded. (Table 16.) Some of this increase is most certainly attributable to increased accuracy in statement of cause, and to the system introduced some years back into this office of writing for further information in cases where some vague cause, such as "tumour," has been given as the cause of death in the original certificate; a system which added, for instance, in the year 1889 no less than 421 deaths to the heading Cancer. Nevertheless, in face of the constant and great growth of mortality under this heading, and the expressed belief of medical practitioners specially engaged in dealing with this class of diseases that they are really becoming more and more common, it seems scarcely possible to maintain the optimistic view that the whole of the apparent increase can be thus explained; and it must be admitted, as at any rate highly probable, that a real increase is taking place in the frequency of these malignant affections.

To what causes such increase may be due is a question outside a purely statistical report; but it may be pointed out that if it be true, as appears to be the general though not the universal opinion of medical experts, that the development of new growths is often due to a constitutional and inheritable tendency, and if, as undoubtedly is the case, such development does not as a rule manifest itself till after the usual age of marriage and of parturition, it must follow as a necessary arithmetical consequence that the tendency shall spread wider and wider among the population. In the case of a disease such as tubercular phthisis, which in a large proportion of cases manifests itself before the age of marriage, there will be at any rate to a certain extent a constant, if an insufficient, weeding out from the candidates for matrimony of those who are most seriously liable to this disease; but in the case of cancer there will be no such preservative influence, and so long as persons with this inherited tendency marry practically without let or hindrance of any kind, there must, as already said, be a constantly growing proportion of the population that shares in the constitutional defect.

Whether it be really the case that the tendency to neoplastic growths is inheritable is a question on which it is not intended here to enter, our

death-registers not furnishing the requisite data for its examination; but it may be pointed out that neither a very considerable proportion of cases with a family history of similar disease, nor even a considerable proportion of cases with a history of such affliction among the direct progenitors, is of itself sufficient evidence of inheritance. For seeing that one out of 21 males, and one out of 12 women, who reach the age of 35, die eventually of cancerous disease, it follows by the law of probabilities that on an average in one of three cases either a parent or a grand-parent will have died of such an affection, supposing such parents and grand-parents to have died after 35 years of age; and the proportion will be still higher if the circle of relatives be extended so as to include not only these direct progenitors but collateral relatives such as uncles and aunts. For supposing a person to have had besides his six parents and grand-parents only four such collateral relatives, say two uncles and two aunts, it will be an even chance that one or more of these ten persons, half of each sex, will have died of malignant new growth, supposing as before that they have died after their 35th year.*

It is true that the rates from which these arithmetical conclusions are drawn are the rates for the three years 1886-7-8, and that as the proportion of deaths from cancer to deaths from all causes has been constantly increasing, the chances of succumbing to it were not quite so great for our parents and grand-parents as for the present generation; and some deduction would in strictness have to be made on this account. Still it is manifest that, after all due allowance for this, the proportion of cases with a family history of cancer would have to be very high indeed before such proportion could be properly quoted as evidence of inheritance.

In view of the apparent, and probably in part real, increase of malignant new growths, it is desirable to ascertain what light can be thrown by our death registers upon the question whether such increase has been shared equally by both sexes, and by all ages, and all parts of the body.

As regards sex, it has been noted in previous reports (*see* 47th Report, p. xviii.) that the increase has been much greater among males than among females. Thus, in 1851-60, the annual registered mortality from cancer was 195 per million living for males and 434 per million for females; but in 1871-80 the rates had risen respectively to 315 and 622 per million, a rise of 62 per cent. in the male rate, but of only 43 per cent. in the female rate.

As regards age, the following figures for the same two decennia show that the increase has been by no means equally distributed over all the

* On the basis of the figures for 1887-8-9, the chance that a man who reaches the age 35 will eventually die of cancer is 1 in 21, and the chance that a woman who reaches the same age will eventually die of cancer is 1 in 12. Taking these proportions, excluding all persons who die before the end of their 35th year, and assuming no heredity, the following table shows how often no death, or one, two, three, &c. deaths from cancer may be expected to occur in 100 families, half the members of which are men and half women:—

Number of Cancer Deaths in Family.	Per 100 Families.		
	Of Six Members, viz. :— 3 Men, 3 Women.	Of Eight Members, viz. :— 4 Men, 4 Women.	Of Ten Members, viz. :— 5 Men, 5 Women.
None	67	58	51
One	28	33	36
Two	5	8	11
Three or more		1	2
	100	100	100

periods of life, but has been greater and greater, with much regularity, the more advanced the age. Thus, among children under 15, the rates show a decline; from 15 to 25 they remain stationary; and then increase progressively with each successive advance of age.

TABLE D.—MEAN ANNUAL MORTALITY FROM CANCER per MILLION PERSONS LIVING at successive AGE-PERIODS in 1851-60 and in 1871-80.

It remains to consider whether the increased mortality from malignant growths has been shared by all parts of the body. Unfortunately the statements of cause in the death certificates given by medical men are, in a large proportion of cases, inadequate to furnish a secure foundation for trustworthy statistical conclusions; and it is probable that the records of hospitals specially concerned with malignant growths, if scantier in amount than our official death-registers, would make up for such quantitative inferiority by their better quality, and would furnish a more satisfactory basis for scientific inquiry. In a large proportion of deaths ascribed to malignant disease, the part of the body which was the seat of the new growth is not stated in the certificate; often, when it is stated, it is stated in such general terms as to be useless for pathological classification, and rarely, if ever, is the information given whether the organ was the primary seat of the disease, or only secondarily affected. Under these circumstances it would be a waste of labour and of money to abstract year by year, as has been proposed, the deaths from these diseases by the parts of the body in which they were located; and the most that can be done, with reasonable consideration of cost, is from time to time to take out a sufficiently large sample of those cases in which the seat of disease is more or less clearly specified; and, assuming that such samples fairly represent the bulk, to divide out the total cancer mortality in proportions derived from them. That is the method by which the figures in the following table (Table E.) have been obtained. The sample extracted from the registers of 1868 consisted of 3164 deaths, 1018 being of males and 2146 being of females; while the sample for 1888 consisted of 7931 deaths, namely 2854 of males and 5077 of females. The parts stated to have been affected have been grouped so far as the imperfect description allowed, in some cases the most probable place of classification being adopted; but in many cases even probability fails as a guide, and such parts have not been classified at all. (*See page xvi.*)

The figures show in the first place, that, though cancers or new growths are vastly more common among women than among men, yet this excess is entirely due to the great liability of the female generative organs and breast to be thus affected, and that when these organs, and those which are especially likely to be secondarily affected from them, or, in the absence of a post-mortem examination, to be confounded with them, are excluded, the excess is invariably on the side of the male sex.

The organs other than generative or mammary in which the female rate exceeds the male are the axilla and the ribs and sternum, probably secondarily affected from the breast; the liver and peritoneum, probably secondarily affected from the uterus or ovaries; the intestines (not rectum) and the parts vaguely described as abdominal, probably either secondarily

* A dash in these four columns means that no death was registered; a cypher that deaths occurred, but less than one in 1,000.

affected from the generative organs or confounded with them; after which are left, even in this minutely divided list, only such trivial exceptions as the brain, the pancreas, the groin, the spleen, the heart, the thyroid, showing each in very small, and therefore not very trustworthy, figures, an excess on the female side. It is, however, noteworthy that small as the figures are, under most of these exceptional headings the female rate was in excess both in 1868 and 1888. Such was the case with the thyroid, the brain, the groin, and the heart. Disregarding such exceptions, under all the other headings the male exceeds the female mortality; but the parts in which such excess is most notable are the lip, the mouth, and the tongue; for, putting these three together, the male mortality in 1888 was 134, while the female mortality was only 20, per million living over 35 years of age, the male rate being thus nearly seven times greater than the female. The rates, it should be observed, have been calculated only for persons 35 years of age or upwards, the object being to equalise in some degree the age-distribution of the two sexes, and so give greater trustworthiness to comparison of their respective mortalities.

As regards the parts of the body which have suffered from the increase in the registered amount of malignant disease, it would appear from the figures in the table that, with exceptions so trivial that they may be disregarded, the increase has been shared by all parts, though by no means in equal proportions. When the rate of mortality from disease in any specified organ is very small, no great importance can of course be attached to the amount of its apparent increase or decrease, for the addition of one or two cases to the total deaths might double the calculated mortality. We must, therefore, in considering the individual organs, limit ourselves to those in which malignant new growths are of tolerably frequent occurrence, let us say those which gave a mortality in 1868 of not less than 15 per million. There were 12 such for males, and under every one of these, with the single exception of the face, there was a notable increase, varying from 20 to 200 per cent. Among women there were 11 organs that gave severally in 1868 mortalities of more than 15 per million; of these, eight showed more or less increase in 1888, while in three there was a decrease.

The following are the exact increases or decreases per cent. for each of these organs, in each sex, the figures being put in brackets when the rates did not reach 15 per million in 1868 in one or the other sex:—

Parts affected.	Men.	Women.
Arms, Legs, Hands, Feet - - - -	+ 73	- 13
Mouth - - - - -	+ 55	(- 26)
Tongue - - - - -	+ 67	- 29
Pharynx, Fauces, Tonsils, Throat - - -	+ 44	- 9
Stomach, Pylorus - - - - -	+ 22	+ 44
Intestines - - - - -	+ 198	+ 273
Rectum - - - - -	+ 102	+ 87
Liver, Gall Bladder - - - - -	+ 124	+ 187
Bladder, Urethra - - - - -	+ 171	(+ 98)
Penis, Testes, Scrotum - - - - -	+ 52	-
Breast - - - - -	(+ 94)	+ 9
Uterus, Ovary, &c. - - - - -	-	+ 19
Lip - - - - -	+ 58	(+ 204)
Face - - - - -	- 6	+ 10
Abdomen (not more closely specified) - -	+ 236	+ 142

It thus appears that the increase has been comparatively slight in those organs which are the commonest seats of malignant growths, namely, the generative and mammary organs of women, and has been largest, and this

for both sexes, in the organs of the digestive and the urinary systems, and notably in the intestines, rectum, liver, and urinary bladder. Among men there has also been a large increase in disease of what may be called the upper organs of the digestive system, namely, the mouth, the tongue, the pharynx and the fauces, while among women there has been no such increase, but on the contrary a falling off.

Developmental Diseases.—The deaths attributed to *old age* have for some years been declining in number, doubtlessly in consequence of the more precise designation of the causes of death of old persons; this decline continued in 1889, and the registered mortality under this heading was at its minimum. On the other hand, the deaths ascribed to *premature birth*, which, as has been several times pointed out in previous reports, have been for a long series of years becoming more and more numerous in proportion to the registered births, showed a further increase in 1889, having risen progressively from 11·19 per 1000 births in 1861–5 to 16·29 in 1889.

Local Diseases.—The 267,243 deaths included in this heterogeneous class were fewer in proportion to the population than in any previous year of the current decennium or than the average in the preceding decennium. The mortality from *diseases both of the nervous system and of the respiratory organs* was lower than in any year since 1872; the mortality from *diseases of the urinary system*, though still high, was slightly below that of any one of the last six years; while the mortality from *diseases of the liver* was at its minimum.

Violence.—The deaths ascribed to some or other form of violence numbered 17,497, and were in the proportion of 603 to a million living. The mortality from *accident*, as also the mortality from *homicide*, was almost identical with that of 1888, but lower than in any earlier year. The death-rate from *suicide* also, which had been abnormally high in each of the three years 1886–7–8, fell considerably in 1889. There were still, however, 2170 persons, namely, 1626 men and 544 women, who were found on inquest to have destroyed themselves. Twelve men were executed during the year, while 172 persons were found to have been murdered. Of these 172 persons, 74 were infants under one year of age, 61 of these being in the first month of life.

Ill-defined and Not-specified Causes.—The deaths for which either no cause was assigned, or in which the cause was too ill-defined for classification, numbered 25,466, or 4·9 per cent. of all the deaths registered; the proportion had been the same in the immediately preceding year, 1888. These unsatisfactorily-described deaths would have been still more numerous had not 3175 letters of inquiry concerning doubtful cases been sent to medical men; the result of which was to add materially to the numbers under some special headings. For instance, 405 deaths were by this process removed from the vague heading Tumour to Cancer or Malignant Disease; 146 to Uterine or Ovarian Disease, and 41 to Syphilis.

Certification of the Causes of Death.—Of the 518,353 deaths registered during the year 1889, the causes of 474,174, or of 91·5 per cent., were certified by registered medical practitioners; and the causes of 29,079, or of 5·6 per cent. were certified by coroners after inquest. The causes of the remaining 15,100 deaths, or of 2·9 per cent., were not certified, this percentage showing a further step in the decline in the proportion of uncertified deaths which has been manifested in recent years. It must not be supposed that all these 15,100 deaths were of persons unattended in their last illnesses by medical men. For many of them—especially in mining

districts—would have been attended by unregistered medical practitioners, acting as assistants to registered practitioners or otherwise; and a further considerable number would be of children who died very shortly after birth, and for the few hours of their life were in the care of registered midwives. The proportions of uncertified deaths in 1889 varied much as in other years in different counties; the lowest proportions per cent. in English counties being 0·7 in Middlesex (extra-metropolitan), 0·9 in Wiltshire, 1·1 in London and in Monmouthshire; while the highest were 4·1 in Kent (extra-metropolitan) and in Derbyshire, 4·3 in Bedfordshire, 4·4 in Westmorland, 4·5 in Durham, 4·7 in Herefordshire, and 5·6 in Huntingdonshire. In Wales the percentage was 5·9, being 7·2 in North Wales, and 5·4 in South Wales.

Offences against the Registration Act.—The Registrar-General has found himself compelled in the course of the year to sanction the institution of twenty-two prosecutions for offences against the Registration Act. In each case a conviction was obtained, and a fine inflicted. The offences were of several kinds; in some instances medical men had falsely certified that they had been in attendance upon the deceased persons; in others midwives had falsely certified to stillbirth in the case of live-born infants; in others false addresses had been given in order to evade the vaccination officer; while in the remaining cases, illegitimate children had been registered as born in wedlock.

PROGRESS OF REGISTRATION.

The names in the alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales were increased in the year 1889 by 1,832,027, this addition raising the aggregate number of names in the indexes, which at the end of 1889 embraced a period of 52½ years, to 79,386,253. The number of searches in 1889 in the various registers was 41,002, exceeding the number in the previous year by 525. The number of certificates issued was 30,491, showing an increase of 438 on the number in 1888. The fees received for searches and for certificates in 1889 and paid into Her Majesty's Exchequer amounted to 5,884*l.* 2*s.* 6*d.*, and exceeded the amount received in the previous year by 76*l.* 2*s.* (Table 26.)

A list of the various public registers and records lodged in the General Register Office, Somerset House, was published in the 34th Annual Report, pp. xxi-xxii and xxv-xxvi.

MORTALITY IN THE ARMY.*

The average strength of the Army, at home and abroad, in 1889, was 210,298, and the deaths were 1961, the rate of mortality thus being 9·3 per 1000, against 9·6 and 9·7 respectively in the preceding two years. The mortality in the army abroad was 13·8 per 1000, the mean rate in the preceding five years having been 15·4; while the rate in the Army at home was only 5·0, and 1·6 per 1000 below the average rate in the preceding five years, such mean rate itself having shown a considerable decline from the mean rates in previous quinquennia. (Table 29.)

* Based upon returns furnished by His Royal Highness the Commander-in-Chief.

MORTALITY IN THE NAVY.*

The average force afloat in 1889 was 50,790. The deaths were 271, being in the ratio of 5·33 per 1000 of the strength. Of the 271 deaths, 197 were due to disease, and 74 (including 7 from heat-stroke) to violence; so that the death-rate from disease was 3·87 and from violence 1·46 per 1000.

Of the 74 deaths from violence, 33 resulted from accidental drowning, 38 from other accidental causes, and 3 from suicide.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships, whether in Her Majesty's service or not, are required, under a penalty, to transmit returns of all births and deaths occurring on board their ships to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, and Ireland. These certified copies of entries of births and deaths at sea constitute the "Marine Register Book." To this Register were added 189 entries of births and 3154 of deaths during the year 1889. Of these 3154 deaths, 1545 were of persons of English origin, while 255 were of persons of British origin, so far as could be judged from the entries, which are not always very precise.

Among *passengers* on board merchant vessels at sea (Table 32), 128 births and 484 deaths were reported in 1889, these numbers differing but slightly from those recorded in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports that the number of masters and seamen afloat in registered vessels belonging to the mercantile marine of the United Kingdom, including the islands in the British Seas, during the year 1889 was 230,263, showing an increase of 6590 upon the number in the preceding year. The reported deaths among masters and seamen during 1889 numbered 3018, corresponding to an annual rate of 13·1 per 1000 of the strength; this was 0·8 per 1000 lower than the rate in the previous year, and was also the lowest rate yet recorded.

INTERNATIONAL VITAL STATISTICS.

In Tables 39–56 will be found international vital statistics relating to most of the principal European States, including the United Kingdom. Table 39 affords the means for comparing the marriage, birth, and death rates in each State for a series of years with the average rates during the period 1861–80. It must, however, be remembered that great caution is necessary in making comparisons between the rates in any one country with the rates in another; inasmuch as there are great differences between countries in the age-distribution of their inhabitants; and it is evident that the marriage, the birth, and the death rates depend largely on this age-distribution.

The *marriage-rate* in 1889 rose not only in England, in Scotland, and in Ireland, but also in Germany, Belgium, the Netherlands, and Norway, whilst in Denmark and in Switzerland it remained stationary, and in Austria, France, and in Italy it declined.

* Based upon returns furnished by the Director-General of the Medical Department of the Navy.

The *birth-rate* declined not only in the several divisions of the United Kingdom, but in all the other European States from which figures have been received, with the exceptions of Belgium, Italy, and Austria, in the last-named of which it remained stationary.

The *death-rate*, which rose slightly in England and in Scotland, declined in Ireland, but remained stationary in the aggregate of the United Kingdom. The same was the case in the German Empire. In Norway, and in Switzerland, it rose; but declined in Denmark, Austria, the Netherlands, Belgium, France, and Italy.

I have the honour to be,

Sir,

Your faithful Servant,

BRYDGES P. HENNIKER,

General Register Office, Somerset House,

Registrar-General.

29th November 1890.

REMARKS ON THE METEOROLOGY OF THE YEAR 1889.*

BY JAMES GLAISHER, ESQ. F.R.S., &c.

The following remarks, both with regard to atmospheric pressure and temperature, are based on the observations made near London, but they may be taken as having a general application.

Atmospheric Pressure.—The readings of the barometer were generally above their averages till the 28th of January, being particularly so from the 2nd to the 4th and from the 22nd to the 28th, when they were a little more than half an inch above their averages, the mean daily excess for these 28 days being 0.28 in.; from January 29th to March 21st it was generally below, being particularly so on March 20th when it was more than an inch below its average, and on several other days was as much as three-quarters of an inch below; the mean daily deficiency for the 56 days ending March 21st being 0.11 in.; from March 22nd to the 31st it was above, the mean daily excess being 0.21 in., from April 1st to June 15th it was generally below, the mean daily deficiency for these 76 days being 0.11 in.; from June 16th to July 6th it was above, the mean daily excess being 0.15 in., from July 7th to August 25th it was generally below, the mean daily deficiency for the 50 days being 0.13 in.; from August 26th to September 18th it was above, the mean daily excess being 0.13 in.; from September 19th to November 5th it was below, being on several days more than half an inch, the mean daily deficiency for the 48 days being 0.17 in.; and from November 6th to December 31st it was generally above, being particularly so from the 17th to the 20th of November, when it was a little more than three-quarters of an inch above, the mean daily excess for the 56 days being 0.56 in.

The highest reading of the barometer at the height of 150 feet above the sea was 30.55 ins. on January 3rd, and the lowest was 28.80 ins. on March 20th; the yearly range was 1.75 ins.

Temperature.—The temperature of the air was below its average till January 8th, being particularly so on the 5th, 6th, and 7th days, when it was $9^{\circ}.4$, $13^{\circ}.9$, and $9^{\circ}.2$ respectively below, the mean daily deficiency for the eight days being $7^{\circ}.3$; from January 9th to February 1st it was generally above, being particularly so on February 1st, when it was 12° above its average; the mean daily excess for the 24 days being $1^{\circ}.0$; from February 2nd to May 2nd it was generally below, being particularly so from the 10th to the 13th, and 26th of February to March 5th, when it was from 9° to 13° below its average, the mean daily deficiency for the 90 days being $2^{\circ}.8$; from May 3rd to July 13th it was generally above, being particularly so from the 22nd to the 25th of May, and on June 14th, the mean daily excess for the 72 days being $1^{\circ}.9$; from July 14th to November 2nd it was generally below, being particularly so on the 21st, 22nd, and 25th of September, the mean daily deficiency for the 111 days being $2^{\circ}.3$; from November 3rd to the 25th it was above, the mean daily excess being $2^{\circ}.9$; and from November 26th to December 31st it was generally below, being particularly so from November 27th to December 8th, and on the 12th and 29th of December, the mean daily deficiency for the 36 days being $4^{\circ}.2$.

The highest temperatures of the air were $87^{\circ}.0$ at Cambridge, $86^{\circ}.6$ at Royal Observatory, and $86^{\circ}.0$ at Osborne, Salisbury, and Blackheath; and the lowest were $12^{\circ}.2$ at Somerleyton, $12^{\circ}.5$ at Cambridge, and $12^{\circ}.7$ at Barnet.

Rainfall.—The fall of rain was below its average in January; above in February; and below its average again in March. The total fall in

* For Meteorological Tables, see pp. lviii–lxiii.

the three months at Greenwich was 4.36 ins., being 0.62 in. below the average. The falls of rain were above their averages in April, May, and June. The total for the three months at Greenwich was 7.22 ins., being 1.44 in. above the average. The falls of rain were below their averages for July, August, and September. The total fall for the three months at Greenwich was 5.56 ins., being 1.76 in. below the average. The fall of rain was above its average in October; and below in November and December. The total fall for the three months at Greenwich was 6.15 ins., being 0.95 in. below the average. The fall of rain for the year was 23.29 ins., being 1.91 ins. below the average; and the number of days on which it fell was 158.

The heaviest falls of rain at our stations in the year were at Stonyhurst 42.50 ins., at Truro 37.38 ins., and at Bath 36.62 ins.

The least falls were at Leeds 20.98 ins., at Whitchurch 21.95 ins., and at Bradford 22.59 ins.

The greatest numbers of days of rain were 216 at Guernsey, 211 at Truro, and 205 at Stonyhurst; and the least were 145 at Barnet, 146 at Wolverhampton, and 147 at Blackheath.

Thunderstorms occurred on 68 days at the different stations during the year; of these, 13 were in May, 10 in July, 9 in each of the months of April, August, and October, 7 in June, 6 in September, 3 in November, and 1 in both February and December, and none were reported in January or March.

Thunder was heard but lightning was not seen on 67 days during the year; of these, 14 were in May, 12 in April, 10 in both July and August, 6 in October, 5 in June, 3 in September, 2 in each of the months of February, March, and November, and 1 in January.

Lightning was seen but thunder was not heard on 39 days during the year; of these, 8 were in September, 7 in October, 6 in May, 4 in both February and July, 3 in each of the months of August, November, and December, and 1 in June.

Solar halos were seen on 70 days during the year; of these, 10 were in both March and August, 9 in September, 7 in both October and November, 6 in both May and December, 4 in April, 3 in each of the months of February, June, and July, and 2 in January.

Lunar halos were seen on 35 days during the year; of these, 6 were in both February and March, 5 in both January and December, 3 in each of the months of September, October, and November, 2 in May, and 1 in both April and August.

Aurora Borealis was seen on 1 day during the year, viz., on November 26th at Halifax.

Snow fell on 69 days during the year; of these, 24 were in February, 15 in March, 14 in December, 7 in April, 4 in January, 3 in November, and 2 in October; the last fall in the spring was on April 14th at Royston; none fell in May, June, July, August, or September; and the first fall in the autumn was on the 26th of October at Plymouth.

Hail fell on 83 days during the year; of these, 18 were in February, 12 in April, 10 in March, 8 in both October and December, 7 in May, 6 in November, 4 in July, 3 in each of the months of January, August, and September, and 1 in June.

Fog prevailed on 189 days during the year; of these, 26 were in December, 22 in both January and October, 21 in November, 17 in September, 16 in both May and June, 14 in March, 12 in April, 10 in July, 7 in August, and 6 in February.

PRELIMINARY TABLES.

TABLE 1.—United Kingdom: Population of its several portions estimated to the the British Seas, and of the portions of the Army,

YEAR.	UNITED KINGDOM. AREA 77,143,938 ACRES.			ENGLAND AND WALES. AREA 37,239,351 ACRES.		
	Persons.	Males.	Females.	Persons.	Males.	Females.

* Deaths from Relapsing Fever prior to 1869 were classed with "Simple and ill-defined Fever," and deaths from Cerebro-spinal Fever prior to 1877 were classed with Typhus, but, since those dates, have been included under this heading.

† Deaths of children under 5 years of age from Remittent Fever were classed with Enteric Fever from 1869 to 1880, but in previous and subsequent years have been included under this heading.

TABLE 15 (continued).—ENGLAND.—Deaths from Various Causes, 1865-89.

CAUSE OF DEATH.	1865.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.

* Deaths from this cause prior to 1881 were classed, partly with "Diseases of Respiratory System," and partly with "Ill-defined and not specified Causes."

† Deaths from these diseases prior to 1881 were classed with "Other Tubercular and Scrofulous Diseases."

TABLE 16.—ENGLAND.—Annual Death-rates, from Various Causes, to a Million Persons living, 1865-89.
(Decimals are omitted, the nearest whole number being taken. When the Deaths from any Cause were too few to give a rate of 0.5, a cipher is inserted.)

CAUSE OF DEATH.	1865.	1866.	1867.	1868.	1869.	1870.	1871.	1872.	1873.	1874.	1875.	1876.	1877.	1878.	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	1888.	1889.

1870	195,962	4,523	23.1	1889	230,263	3,013	13.1

NOTE.—Up to and including 1886 masters were excluded from the above employment and mortality figures; the latter of which contained some cases of men who died in colonial vessels and fishing vessels not registered under the Merchant Shipping Acts, whose crews are not included in the employment column. Since 1886 masters are included in both columns, and the employment and mortality figures relate only to persons employed in registered vessels belonging to the United Kingdom, the Isle of Man, and Channel Islands.

* The prices of Consols for the years 1840-52 relate to the 12 months beginning 1st April; from 1853 onwards the prices relate to calendar years. For the years 1840-88 the prices relate to stock bearing 3 per cent. interest, for 1889 to stock bearing 2½ per cent.

† From the Board of Trade Statistical Abstract.

‡ The prices of coal are derived from Parliamentary Returns furnished by the Registrar of the London Coal Market, by order of the House of Commons.

§ Derived from Returns, published by the Local Government Board, of the number of persons in receipt of Relief on the last day of each week.

INTERNATIONAL VITAL STATISTICS.

TABLE 39.—Persons Married, Births, and Deaths per 1000 of the Population, in the UNITED KINGDOM and in OTHER EUROPEAN STATES.

(Tabulated from returns furnished by the authorities of the various States.)

YEAR.	UNITED KINGDOM. (17 yrs.)	ENGLAND AND WALES. (17 yrs.)	SCOTLAND. (17 yrs.)	IRELAND. (17 yrs.)	DENMARK. (17 yrs.)	NORWAY. (17 yrs.)	SWEDEN. (17 yrs.)	AUSTRIA. (17 yrs.)	HUNGARY. (17 yrs.) NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The figures in this table refer exclusively to the civil population.

* Census year.

† The excessive mortality in 1866 was due to cholera and the war.

‡ Cholera caused the deaths of 107,007 persons in 1873.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—Statistics for the 7 years 1871-77 were not issued owing to the disturbed state of the country. The decline in registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred in that year.

* Censuses were taken on 31st December 1860, 1866, and 1877.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The populations in inter-census years are somewhat over-estimated, no account having been taken of emigration.

* Census year.

TABLE 57.—ENGLAND. Changes in the Constitution of Registration Districts and Sub-districts during the Year 1889.

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.

(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF REGISTRATION DISTRICT.	Date of Change.	Nature of Change.
16	BETHNAL GREEN	1889. 1 October	The four sub-districts of <i>Hackney Road</i> , <i>Green</i> , <i>Church</i> , and <i>Town</i> were dissolved and the district re-arranged as follows, viz.:— <i>Bethnal Green North</i> sub-district consists of that portion of the parish situate north of Bethnal Green Road and west of Cambridge Road, including the north side of Bethnal Green Road (aggregate population 51,137); <i>Bethnal Green South</i> sub-district consists of that portion of the parish situate south of Bethnal Green Road and west of Cambridge Road, including the south side of Bethnal Green Road (aggregate population 34,399); and <i>Bethnal Green East</i> sub-district comprises both sides of Cambridge Road and all that portion of the parish to the east of it (aggregate population 41,405).
303	WILLITON	1 May	The parish of West Quantoxhead (population 278) was transferred from the sub-district of <i>Stogumber</i> to that of <i>Williton</i> .
377	TENBURY	1 May	The sub-districts of <i>Tenbury</i> and <i>Bockleton</i> were united under the name of <i>Tenbury</i> (population 7,588).
387	ASTON	1 April	That part of the parish of Aston forming the parliamentary borough of Aston Manor, which was formerly in <i>Erdington</i> sub-district, was constituted a separate sub-district, and named <i>Aston Manor</i> (population 53,842).
431	NOTTINGHAM	1 April	The sub-districts of <i>Lenton</i> and <i>Park</i> were united under the name of <i>Lenton</i> (population 25,483).
496	HALIFAX	1 April	That part of the parish of Skircoat which is situated in Sowerby Bridge Local Board District (population 2,538), was transferred from the sub-district of <i>Halifax</i> to that of <i>Sowerby</i> .
595	LLANDOVERY	1 January	The sub-districts of <i>Llansadwrn</i> and <i>Conwil Cayo</i> were united under the name of <i>Conwil Cayo</i> (population 3481).
595	LLANDOVERY	1 April	The parishes of <i>Llansadwrn</i> and <i>Llanwrda</i> (aggregate population 1502) were separated from the sub-district of <i>Conwil Cayo</i> and constituted a separate sub-district under the name of <i>Llansadwrn</i> . The effect of this change is to restore the arrangement of the district existing prior to 1st January 1889 (<i>see above</i>).

Under the provisions of "The Divided Parishes and Poor Law Amendment Acts, 1876 and 1879," changes were made on the 24th March 1889 in the constitution of the following Districts, viz.:—MAIDSTONE (50), HOLLINGBOURN (51), EAST ASHFORD (55), BRIDGE (56), PERTWORTH (80), MIDHURST (85), ISLE OF WIGHT (91*), WINCHESTER (101), ALRESFORD (105), BRADFELD (118), READING (119), WOKINGHAM (120), WOODSTOCK (152), BANBURY (155), ORSETT (190*), BILLERICAY (191), CHELMSFORD (192*), MALDON (194*), LEXDEN (197*), BRAINTREE (199*), DUNMOW (200*), BASFORD (330), BINGHAM (434), BELPER (437), ASHBORNE (438), NORTHWICH (447), CONGLETON (448), CHORLTON (454), ASHTON-UNDER-LYNE (468), ROTHBURY (567*), BANGOR (628), and HOLYHEAD (630B).

* In these cases the limits of the sub-districts only are affected.

* The Registration Counties consist of groups of Registration Districts, which are generally co-extensive with the Poor Law Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties differ therefore more or less from the boundaries of the Geographical Counties. For areas and populations of the Registration Divisions and Counties, see pages 64-67.

* The 632 Registration Districts (Paddington 1a and Holyhead 630b) having been constituted Registration Districts since the numerical arrangement 1 to 630 was adopted on 1st January 1881 are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Registration Sub-districts (2128 in number at the end of the year 1888) are sub-divisions of Registration Districts, within which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates a Hospital or Infirmary; *L* a Lunatic Asylum; and repetitions of these letters show the number of such Institutions in each Registration sub-district.

† The Deaths in the principal Institutions in England in 1889 are given on pages 71-94.

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1889.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1889 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1786 Institutions; of which 737 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 959 Hospitals or Infirmaries; and 90 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1786 Institutions 58,238 deaths were registered during the year, or 11·2 per cent. of the total deaths in England and Wales, against 10·8 and 11·4 per cent. in the two preceding years; 34,307 occurred in Workhouses, 18,140 in Hospitals, and 5791 in Lunatic Asylums. The proportion to total deaths was 6·6 per cent. in Workhouses, 3·5 in Hospitals, and 1·1 in Lunatic Asylums. The proportion of deaths recorded in Workhouses, which had been 6·5 and 6·9 per cent. in 1887 and 1888, declined to 6·6 per cent. in 1889.

Information relating to the deaths recorded in many Private Lunatic Asylums, Private Asylums for Idiots and Imbeciles, and in a few other institutions, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1889.

* In this classification of Violent Deaths the totals of the sub-divisions Burns, Scalds, &c., Drowning, and Suffocation, necessarily differ from the totals of the headings bearing similar names in the classification of Causes of Death on pp. 120, 121, as the classification here takes account of the cause of the injury, and there only of the nature of the injury.

ENGLAND.—DEATHS from ACCIDENT and NEGLIGENCE at different Periods of Life, in the Year 1889—
Males—continued.

No.	CAUSE OR CHARACTER OF ACCIDENT.	ALL AGES.	AGES AT DEATH.

* The deaths of 22 males from Hydrophobia in the year are classed under Zoogenous Diseases in the Table of Causes of Death (see p. 112).

† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

Of the above 10,790 ACCIDENTS, 131 are stated to have occurred to Men in a state of INTOXICATION and 4 to Men suffering from DELIRIUM TREMENS. And in 255 other cases Death was accelerated by the supervision of Erysipelas, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCE- LERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1—	2—	3—	4—	Total under 5 Years.	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85 and up- wards.
		Infants under 1 Month.	Others.

* The deaths of 8 females from Hydrophobia in the year are classed under Zoogenous diseases, in the Table of Causes of Death (see p. 113).

† When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury.

OF the above 4235 ACCIDENTS, 60 are stated to have occurred to Women in a state of INTOXICATION. And in 66 other cases Death was accelerated by the supervention of Erysipelas, MORTIFICATION, PYÆMIA, or TETANUS.* Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	Total under 1 Year.		1	2	3	4	Total under 5 Years.	5	10	15	20	25	35	45	55	65	75	85 and upwards.
		Infants under 1 Month.	Others.																
Intoxication at time of Accident	60	-	-	-	-	-	-	-	-	-	1	-	8	18	19	10	4	-	-
Acceleration by {	Erysipelas	10	-	-	-	-	-	-	-	-	-	1	1	-	1	1	5	1	1
	Mortification	5	-	-	-	-	-	-	-	-	1	1	-	1	-	-	-	1	1
	Pyæmia	35	-	-	2	-	1	3	3	5	-	1	3	6	4	4	3	3	-
	Tetanus*	16	-	-	-	-	-	-	3	1	-	1	4	8	1	2	1	-	-

* Cases of Tetanus which are not stated to be the result of injury are classed as "Idiopathic Tetanus" in the Table of Causes of Death (see page 115).

INDEX OF REGISTRATION DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881. Since that date two new Registration Districts have been formed, the District of Kensington (1) having been divided into Paddington (1*a*) and Kensington (1*b*), and the District of Anglesey (630) into Anglesey (630*a*) and Holyhead (630*b*).

For names of Towns, such as *Leamington, Torquay, &c.*, which are not found in this "Index of Registration Districts," see the "Index of Registration Sub-districts" (pp. 208-217) and "Index of certain Towns" (pp. 218, 219).

INDEX OF REGISTRATION SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having compound names in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
